

# JF 11020

profile	code	reinforcement dim. [mm]	side [mm]	maximum horizontal span [mm]	maximum vertical span [mm]
JF11020	JF11020	30 x 10 x 2	110	900	900

Maximum spans calculated considering:

- maximum permanent deformation due to own weight 2,5 mm
- maximum non-permanent deformation 30 mm considering a standard wind load of 150 kg/m<sup>2</sup>
- aluminum reinforcement standard thickness 2 mm, with greater thicknesses it is possible to reach greater spans
